Overlapping Photo Editor – How to Put a Picture on Another Picture

Last Updated on March 12, 2022 by Peter Wood

Overlapping photo is an excellent method to make the photos attractive and appealing. Just similar to the methods to blend two images of Enlight, how to find more photo editors to overlay photos together? If you simply search for overlapping photos, you might not be able to locate the desired tool.

Why? Because of the different overlapping photos methods, or the number of photos you want to blend, you should learn more details beforehand. Just check out the information from the article and choose the desired one accordingly now.

Part 1: How to Overlay Two Images in Paint on Windows PC

Part 2: How to Create Overlapping Photos via GIMP on Mac

Part 3: How to Blend Two Pictures Online with Photovisi

Part 4: 2 Methods to Overlay Multiple Photos as Profession

Part 1: How to Overlay Two Images in Paint on Windows PC

If you simply need to blend two images together, you can use the preinstall Paint to create an overlapping photo. It is a free photo editor that is available for Windows 10/8/7. Just launch the default overlapping photo editor and follow the steps to put a picture on another picture.

Step 1: Launch Paint software on your Windows computer. Click on the File menu and choose the Open option to load a photo to overlap. You can open two Paint tools at the same time.

Step 2: Locate the Paint for the photo you want to overlay. Go to the Image menu and choose the Select option, you can cut out the desired overlay part in transparency with the Selection shapes tools.

Step 3: Use the Ctrl + C and Ctrl + V to overlay the cutout part to the background image. Drag the squares on the corners of the second photo to adjust its size and location.

Step 4: If you want to keep the aspect ratio, you can tap on the Shift option on the keyboard during resizing. After settings, you can click on the OK button to confirm the changes.

Step 5: Located to the File menu and select the Save as option to export the overlapping photo to your computer. It is the easiest method to blend two images on your Windows PC.

Part 2: How to Create Overlapping Photos via GIMP on Mac

Is there a free method to create overlapping photos on Mac? GIMP for Mac is an open-source overlapping photo editor, which enables you to overlay images with transparency with ease. Just learn more about the detailed steps to put one image to another as below.

Step 1: Open the photos to overlap in GIMP for Mac. Select the photo to be a background. Navigate to ribbon and select the Layer menu and choose the New Layer option.

Step 2: After creating the new layer, choose the Transparency option in the Layer Fill Type panel to overlay photos with transparency.

Step 3: Swift to the second photo and click on the Edit button and choose the Copy option.

Step 4: Turn back to the background photo. Tap on the Edit menu and then use the Paste option to paste the second one on the new layer.

Step 5: Navigate to Layer on the top ribbon and select the Anchor Layer option. Select the Layer menu, choose the Mask option to choose the Add Layer Mask option, and choose White in the Add Layer Mask box.

Step 6: Apply radial gradient on the mask layer with the Gradient tool in the toolbox. You can adjust the parameters and the location repeatedly to get a satisfying overlapping photo.

Step 7: Navigate to the Image menu on the ribbon and select the Flatten Image option to blend the layers. You can go to the Select File menu and choose the Save As option to save the overlay photos to your Mac.

Part 3: How to Blend Two Pictures Online with Photovisi

Different from the traditional method to blend two images, Photovisi Overlapping Fade is an excellent online tool to overlay multiple photos with transparency automatically. Just as the name of the tool, it will fade the background for you when you upload the photos.

Step 1: Go to www.photovisi.com in any browser. Search for overlapping in the search bar on the top. It will show you all overlapping photo frames, like Overlapping Fade, Orderly Overlapping Stacks, and so on.

Step 2: Choose the Overlapping Fade option that enables you to create overlapping photos with a transparent background. Click the Add Photos button to import photos from your computer or social media.

Step 3: Once you have loaded the photo, you can customize the orientation and size with the arrow tools. Of course, you can also change the value of Opacity in the setting windows.

Step 4: Select more other photos and repeat the settings. Click the Change Background option to add a background for the overlapping photo. Click on the Continue option to confirm the process.

Part 4: 2 Methods to Overlay Multiple Photos as Profession

Is there any other method to overlay multiple photos? When you have to blend multiple photos seamlessly, you have to use the professional overlapping photo editor instead. Here are two of them to make panorama photos and mosaic photos.

Overlay Multiple Photos to a Panorama Photo

When you need to overlay several photos as a panorama, WidsMob Panorama is the desired overlapping photo editor you can take into consideration. It can stitch photos together as panorama photos seamlessly.

4 different overlapping methods, horizontal, vertical, 360°, and in tile.

Provide both manual and automatic methods to adjust overlay points.

Auto-group the photos for panorama with the advanced overlapping algorithm.

Enhance the overlapping photos with multiple effects and filters.

Win Download Mac Download

Step 1: Import and select overlay photos

Download and install the overlapping photo editor on your computer, you can launch the program and import the photos to the program. After that, you can choose the photos you want to overlay.

Step 2: Overlay multiple photos to a panorama

Select the overlapping mode, such as horizontal, vertical, 360°, or in tile to overlay multiple photos to a panorama. To create a 360° panorama, you should at least stitch more than 6 photos.

Step 3: Edit and enhance the overlapping photo

Click on the Align Points button and drag the control points to adjust the location of the photos. You can also click the Adjust Blend tab to adjust the overlapping area of the photos with ease.

Step 4: Save or share the overlapping photo

The Restore button enables you to save the original blending path. Click on the Done button to finish the overlapping photo. You can save the output on your computer or share it online.
