Aqua Deskperience és un programari especialitzat en capturar text i imatges amb moltes altres funcionalitats. Destaca per la capacitat que posseeix per reconèixer i emmagatzemar qualsevol conjunt de caràcters que hi hagi a la pantalla, encara que aquests no han de pertànyer a un PDF.

Aquesta aplicació pot emmagatzemar en fitxers de text o al porta el nom de tots els arxius que hi hagi en un directori amb tan sols seleccionar-los. També permet traduir a diversos idiomes el text capturat d'una finestra i, fins i tot, comprovar l'ortografia (encara que sembla que, per ara, aquesta característica només funciona en anglès).

La captura de gràfics també és molt interessant. Permet recuperar des finestres completes, fins a àrees rectangulars, passant per formes definides per l'usuari o, simplement, el color d'un determinat píxel de la pantalla.

Finalment, també inclou un revelador de contrasenyes ocultes mitjançant asteriscos.

Requisits

Sistema operatiu: Windows 2000 / XP

Processador : 700 MHz

Memòria RAM : 128 MB

Editorial review

This is a state of the art tool for capturing anything in your computer screen - text, fonts, images, etc. A very easy to use tool and also a very useful one if you have forgotten some of your passwords.

Aqua Deskperience enables you to capture text that is impossible to copy with the traditional copy and paste method.

For example, you will be able to copy error messages, the text in buttons or in documents that are locked or protected, so that you will not need to type every word saving you a lot of time.

You can also identify the font it has been used in a text, its color, and every possible feature. At the same time, you can also translate the text selected, check the spelling of a word, or do a Google search just by using the right combination of keys.

Another important feature is the possibility to capture any part of your screen. This is usually done by pressing two or three keys on your keyboard - with this tool you just have to select the area you want to capture and you will be able to save it in any format, in any part of your PC, or send it via e-mail to share with someone else. This feature also allows you to pick one of the colors in the image and see its information.

Finally, if you forget some of your passwords, Aqua has a password revealer tool which accurately shows you the passwords hidden under the asterisks. It works with most Windows applications and with online hidden passwords too, like, for instance, those that open your e-mail account in Yahoo! or Google.

Pros

Easy to use.
Password revealer.

Cons

Anyone can use the password revealer in your computer.

Aqua software is no longer available.
Thank you for all your support!
Notice
Aqua has been replaced with Screen Scraper Studio. Try it now

ScreenScraper Studio Very fast and reliable screen scraper
Aqua used ScreenScraper SDK screen scraping engine to extract text out of GUI of web and desktop apps.
In the last 6 years we have focused our R&D on creating a professional screen scraping tool that can be fast, reliable, precise and easily integrated with your app. And they say we've made a good job so far.

Studio is compatible with most GUI technologies on Windows x86 and x64, including Win32, MFC, VB6, WinForms, Java, FoxPro, WPF, Flash, Silverlight, Adobe Reader, Internet Explorer, FireFox.
