Based on the available specifications for the Parkside drill PSBSA 18-LI B2 (and the entire PSBSA series from Lidl's Parkside brand), here is the torque information you need:

1. Peak Torque (Maximum Torque)

The maximum torque for this model is:

55 Nm (Newton meters)

This is the highest torque the drill can generate under ideal conditions (e.g., at full battery charge, with the clutch set to maximum, and under high load).

2. Adjustable Torque Settings

The drill has:

25 torque settings (including a drill mode).

The torque range is adjustable from ~2 Nm up to 55 Nm, depending on the clutch setting.

Setting "1" gives very low torque (for small screws).

Setting "25" gives the maximum torque before the drill mode.

Drill mode (symbol:
