Image editors - GIMP

Autor:
Data de publicació: 20-06-2020

Hi ha diverses maneres molt ràpides i fàcils de fer GIFs animats. Si voleu fer un GIF ràpid a partir d'un seguit d'imatges capturades, hi ha tot un seguit d'aplicacions web que us ho faran, i carregueu el producte acabat a Imgur o a un altre host. Per obtenir més control, podeu utilitzar un client d'escriptori gratuit amb funcions addicionals que us permeten afegir títols, aplicar filtres i molt més.

No obstant això, si voleu un control complet del vostre GIF animat, heu de fer-ho amb un editor d'imatges amb totes les funcions. I si no voleu gastar molts diners amb Photoshop, la vostra millor aposta és agafar l'editor gratuït d'imatges FastStone.

DescriptionCreatorDate of release to the publicLatest stable versionCost (USD)License

Note 1: The latest version of iPhoto is free for Mac. iPhoto cannot be purchased separately as it is part of the iLife-suite available for Apple Computer for $99.

Note 2: Photogenics' $699.00 price is for a floating license including both Windows and Linux. Version for Pocket PC is $53.

Supported operating systems
It shows on which operating systems the editors can be used natively (without using emulators), this means for which operating system each program was originally designed (no, for example Adobe Photoshop for Windows running on Linux with Wine).

Note 1: External plugins may allow the program to perform some tasks, such as noise reduction or lens distortion, that could not otherwise be done.

Note 2: Artweaver does not have scripting by default, but with the Lua Scripting Plug-In, you can add scripting to Artweaver using the Lua programming language.

Note 3: There are two: the main page and the swap page.

Note 4: Helicon Filter does not implement layers, but it can insert frames and editable text, and objects from one photo can be brushed into the main photo.

Note 5: Although Helicon Filter does not support actual scripting, it is capable of storing and reusing sequences and settings of edits.

RAW imports.BMP.GIF.JPEGJPEG 2000.PNG.TIFF.PSDCorel PaintShop Pro| PSPXCFPCXOpenEXR

Note 1: Photoshop requires an optional plug-in included on the installation disc to support JPEG 2000.

Note 2: Deluxe Paint (and most Paint systems) for AmigaOS versions 3.0 and earlier can load and save in almost any file format for which information is registered on the system.

Note 3: GraphicConverter requires Mac OS X or higher with Image Magick application installed from Fink package or any other distribution to support XCF.

Note 4: PSD is only supported in Krita up to version 6, since version 7 the Photoshop format is blocked.

Note 5: Macromedia Fireworks requires the QuickTime plug-in to support JPEG 2000.

Note 6: MS Office Image Manager (Microsoft Office Picture Manager) and Paint. NET only supports TIFF for viewing and editing the first page.

Note 7: PSD is only supported on openCanvas Plus, not regular openCanvas 4.

Note 8: Free plug-ins required to support JPEG 2000, PSD, and XCF can be found in Paint. NET's website.

Note 9: In Tux Paint for BMP, JPEG, and PNG formats, the user is in an interface that does not allow interaction with the file system. Files are selected by icons (thumbnails) and can be loaded sun
